

Maison Nicolas

2015

Sauternes

Often harvested late in the season, the grapes develop the “*Botrytis Cinerea*” also known as noble rot resulting in concentrated and distinctively flavored wines.

This region has a maritime climate and is also known for “*le ciron*” similar to a small stream which produces a mist from evening to late morning that promotes the development of the botrytis fungus.

WHEN TO DRINK

One to six years

FOOD PAIRING

Cakes, pastries, creme brulee, foie gras

SERVING TEMPERATURE

53°F

RESIDUAL SUGAR

9.5% per liter
